## Work Experience

---

### Cloud Engineer \*\*\*Amazon Web Services Platform

08/2021 – Present

- Designing, installing, configuring and administering network and security infrastructure (e.g.: firewalls, WAF, routing, ingress/egress management, VPN technologies, cloud security vendors, SIEM, vulnerability scanners, anomaly detection tools etc.
- Building, deploying and maintaining multi-account security controls and engineering cloud resource security posture and implementation of cloud-based controls and systems.
- Understanding of cloud architectural implications of meeting industry standards such as ISO 27001, NIST, HIPAA, and PCI DSS frameworks.
- Developing, and building security offerings, while envisioning the next level security requirements, building teams and leading consultants to deliver such offerings, reviewing quality assurance of the deliverables.
- Developing and building business pipeline, identifying and scoping customer requirements as well as pricing opportunities for various complexity of customer requirements.
- Working backwards from Customer requirements to build custom solutions based on best practices and design patterns that work.

### Manager/Principal\*\*\*Capital One, McLean, VA

09/2018 – 08/2021

- Leading the building of proof-of-concept tools to automate the testing of cloud as well as on-prem governance controls to ensure regulatory requirements are met.
- Leading the automation project to streamline and automate controls and compliance requirements for over 2000 applications in areas such as Identity and Access Management, Business Operations, Change Management etc.
- Building cyber tools to monitor, detect and/or prevent cyber events in the AWS cloud environment.
- Extensive experience with leading solution delivery in multiple security areas such as IAM, Incident Response, Compliance, Data Protection, or DevSecOps.
- Understanding architectural implications of meeting industry standards such as ISO 27001, HIPAA, and PCI DSS frameworks.
- Enterprise security solution implementation and operations experience, including identifying the relationships between business services, information, applications, and infrastructure assets.
- Develop technical and written solutions to cyber security vulnerabilities (Active Directory Group Policy, Local Security Policy, Windows/Unix scripts, documented mitigations).
- Direct people management experience leading a team of at least 7 consultants tasked with completion of cybersecurity activities and functions over the program with high quality and low friction.
- Preparing and training colleagues on how to leverage emerging technologies (RPA, IoT, ML etc) to solve internal audit and related compliance problems as well as leveraging these technologies for identifying opportunities.
- Creation, distribution and presentation of weekly, monthly and quarterly status reports and briefings.
- Driving strategic change and influencing leaders inside and outside your organization.
- Able to learn, understand, and communicate technical concepts and challenges.

- 
- Experienced in managing a decentralized and diverse team working in a distributed environment (including across multiple continents) with shifting priorities.
